

SATELLITE COMPONENTS

Before beginning assembly, identify the Satellite components furnished for your display. Satellite display systems are available in Round, Square, and Triangle configurations. Each Satellite consists of a number of expandable stacked frame sections covered by magnetically-attached panel skins.

Typical Satellites range from one to five sections in height and will consist of a Bottom Frame, a Top Frame, and an optional number of Mid Frame sections.

Our new, improved Satellites come with hubs and folding top and bottom scissors pre-installed for ease of setup.

ROUND SATELLITE TOP FRAME
With Four Flat Infills

SQUARE SATELLITE TOP FRAME
With Four Corner Infills

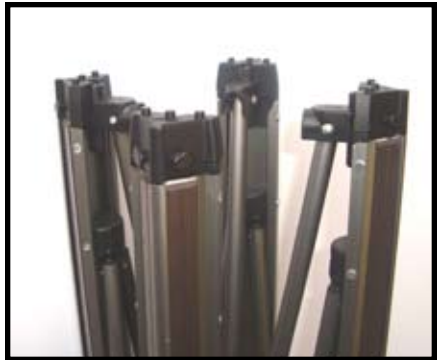

TRIANGLE SATELLITE TOP FRAME
With Three Corner Infills

SQUARE SATELLITE BOTTOM FRAME
With Adjustable Feet on Bottom

SQUARE SATELLITE MID FRAME
With Plain Hubs on Top

SQUARE SATELLITE TOP FRAME
With Panel Hangers on Top

SATELLITE SETUP

Setup shown using a 3-high Square Satellite. Setup sequence is similar for all Satellite configurations and heights.

Begin by expanding the Bottom Frame section and placing it as required. When the frame is fully expanded, the top and bottom scissors will snap into a flat "X" or "Y" configuration.

(To re-collapse the frame, press inward on the top and bottom scissors, and the infills will fold together.)

Expand a Mid Frame and place it over the Bottom Frame so that bottoms of infills fit over top hubs of frame below.

When frame sections are fully engaged, clasps on frame above will lock over hubs on frame below for a secure connection.

(To detach frames, press inward on ridged portion of clasp while easing frame sections apart.)

For higher units, continue adding Mid Frame sections as required.

SATELLITE SETUP

To complete framing structure, expand Top Frame and place over top of uppermost Mid Frame.

Rotate adjustable feet as required to level unit.

Attach graphic panel by hooking notches at top of panel over panel hangers at top of Satellite frame.

Working from top down, guide panel into place so that magnetic strips on panel align with and adhere to infills.

Repeat until all panels are installed.

SATELLITE SETUP

Completed Satellite should appear as shown.
